– kitchen recycling solution

KK5D – Hideaway Deluxe 15 L
– bathroom solution

Hidden Bin solutions – *the secret to organised living*

In today's society our lives are busy, so an organised home can instantly give a sense of control and peace of mind. From the Kitchen to the laundry, the office to the bedroom, an organised home can be created using Hideaway Bin storage solutions.

Hideaway Bins offer an easy way to keep rubbish and mess hidden away within your kitchen. The kitchen is an important part

of the home, making it a good idea to plan the layout of your kitchen and its storage solutions on the way you move around your kitchen when cooking. To limit your bending and movement around the kitchen when preparing food, it is ideal to top-mount your bin at sink height next to the food preparation area. This way you are able to prepare food and move waste directly into the bin.

All units are easy to clean and are made from zinc treated steel which has been powder coated for strength and durability. Differing bucket configurations are available, such as a single or double, 15 or 20 Litre buckets or single 50 Litre buckets for the larger family. The installation of a double bin system is an ideal solution for rubbish and recycling, or alternatively Hideaway Bins can be used for storage of food such as baking goods or dry animal foods.

It is easy to transform a laundry into an efficient workspace with the use of a 50 Litre Hideaway Bin. With a weight capacity of 40kgs across the tracks, the bins provide a great way of hiding dirty laundry away behind closed doors. If space is available, mounting two bins one beside the other can provide an easy solution for sorting washing as you go, making life simpler.

Integrating a single Hideaway Bin into the bathroom is a practical and stylish space saving solution. Bathroom waste is often an afterthought in bathroom design and a small bin is often placed in the corner of the room taking up space and is often an eye saw. This integration keeps bathroom waste discreet and can often enhance the design rather than hinder it. Home offices and wardrobes are other areas of the home where disposable of rubbish is often required.

There are three New Zealand Made ranges available to choose from, with each fitting into new or

existing cabinetry. The Hideaway Compact is designed for modest spaces and the range includes a perfume sachet for odour control. Hideaway Deluxe Bins include a perfume sachet in the design, but feature removable, foam sprung friction fit lid that creates a seal across the buckets. The third style, the Hideaway Soft Close, offers a similar function to the Deluxe, but with the added features of self close tracks preventing the bin from slamming and the friction-fit lid featuring a 'Clinikill' powder coat that fights bacteria to keep the bin solution hygienic.

It's easy to create an organised home... Hideaway Bins, providing storage solutions for every room!
